

Who is the artist that earned the most and how many songs did he sell?

The artist, Iron Maiden, has earned the most and he had 140 songs.

The query returns the artist ID, name, earning and number of songs. The earning is calculated based on the InvoiceLine table.

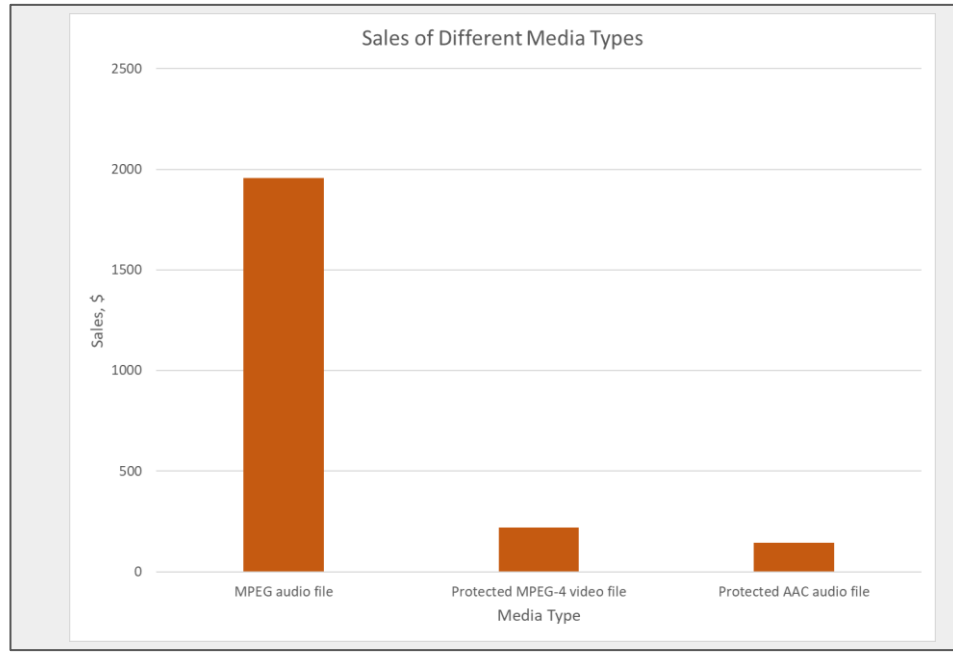

How did the sales support agents do? And was their performance even?

The three sales support agents had an even performance, when compared to each other. The total amount of sales each did and the number of the customers each handled were very much similar.

Two queries were written; one gives the number of customers each served and another gives the total amount of sales each brought to the company.

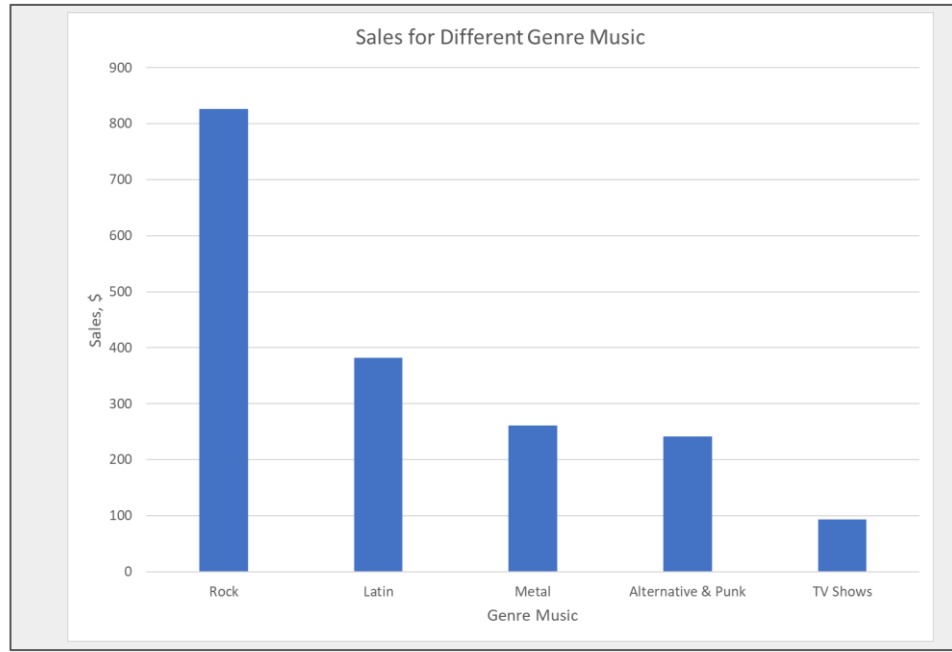

How did the sales of the different Media Type compare?

MPEG audio file was the top sold media type with a value of \$1956.24, followed by the protected MPEG-4 video file type and the protected AAC audio type. The purchased AAC audio and AAC audio file types had almost negligible sales, and therefore they are not shown on the bar chart.

The query gives the total sales of each type.

What Genre music was sold the most? And what was sold the least?

Rock music was sold the most with sales of \$826.65, whereas Rock and Roll was the least sold music with a value of \$5.94. The graph shows the top 5 Genre music in terms of sales amount.

The query returns the total sales of each of the different music.
